MCS Systems to get TUF on hard water at Kalgoorlie's GME

MCS Systems will showcase its Turbu-Flow (TUF) anti-scale water systems on **Stand 1134** during the Goldfields Mining Expo (GME) at the Kalgoorlie-Boulder Racing Club from October 28-30, 2008.

Water high in calcium is known as hard water. While hard water is not a health risk, it brings about the formation of 'lime scale' on pipe work, appliances and associated equipment leading to increased maintenance and eventual equipment failure.

It also has poor soap and/or detergent performance compared to soft water.

Turbu-Flow protects against lime scale (calcium carbonate) deposits in such water.

According to MCS, TUF has been proven in the field for more than 20 years, and prevents build-up of lime scale, removes pre-existing scale, requires no maintenance, does not use any chemicals and needs no temperature considerations.

The company claims that prevention of scale build up means equipment lasts longer and operates more efficiently, meaning less downtime.

TUF is reportedly easy to install, good for the environment, suitable for potable water and works with both hot and cold water. TUF also maintains system pressure and flow and improves soil penetration.
