

**MEDIA RELEASE**

## **Delkor to feature three new mining industry products at Kalgoorlie's GME**

**Delkor** will release a range of thickeners, flotation cells and clarifiers for the mining industry on **Stand 3004** during the Goldfields Mining Expo (GME) at the Kalgoorlie-Boulder Racing Club from October 28-30, 2008.

The company, which specialises in the design, manufacture and supply of mineral processing and liquid/solid separation equipment, will feature the following at GME:

- The Ultrasep Thickener, which is virtually maintenance-free because it has no moving parts. It is designed for use in the metallurgical and mineral processing industry for mill circuit thickening, counter current decantation, backfill and carbon fines recovery, dewatering and water recovery and slag treatment
- Round tank flotation cells with purpose-designed levels of solids suspension, air rate adjustment, easy froth-cone positioning and a stable pulp-froth interface for optimum operation. The cells are used in roughing, scavenging, cleaning and re-cleaning unit and pilot cell applications to process copper, zinc, platinum group metals, phosphates, graphite slag and effluents
- The Pinned-Bed Clarifier, a unique process for hydrometallurgical plants where solution clarity is important. Offering very low suspended-solids counts in the overflows, the clarifier regularly achieves clarities of less than 30 ppm solids.

Delkor's stand will also cover its existing product range of horizontal belt filters (more than 800 of which have been installed worldwide), screens (more than 600 installations worldwide), thickeners and clarifiers (more than 300 units installed worldwide), filter presses (more than 200 installations worldwide) and gravity sand filters.

Part of the global Delkor Group of companies, Delkor is a leading supplier of horizontal belt filters and associated processing equipment in Australia and has successfully completed many major filter contracts with large blue chip mining companies throughout Australia.
